

Exercise 3

The exercises are not mandatory and need not be handed in, but we still recommend them strongly. This exercise will be discussed in the tutorial online on November 18th, 2022.

1 Writing SQL Queries

We will be using a popular sample database called ‘chinook’ to test out some basic SQL functionalities. It represents data about a fictitious media store, containing tables on customers, music, artists, employees and invoices. You can find more information on the ‘chinook’ database on its GitHub repository. Download the `chinook.db` file from moodle, and work your way through the `intro-to-sql.Rmd` R Markdown notebook.

2 Bonus Task: Solve the SQL Murder Mystery

If you want to further test your SQL skills, try to solve the SQL murder mystery by Knight Lab. You can run the queries directly on their website.
